Olympus

The low acrylamide solution

Olympus is a high yielding, maincrop crisping variety capable of long term storage.

It is highly resistant to common scab, shows resistance to powdery scab, blackleg, skin spot and dry rot.

It is partially resistant to G Pallida and fully resistant to G Rostochiensis. It has a good resistance to bruising and splitting.

Its uniform round shape, pale fry colours, high dry matter and low defect levels deliver high crisp yields.

Independent testing has confirmed the production of extremely low levels of acrylamide during processing.

| Description | |
|--------------------|---|
| Origin | Atlantic x 12601ab(1) |
| Maturity | Early Maincrop |
| Tubers | Round, uniform tubers, shallow eyes, white skin, cream flesh |
| Consumer Quality | High dry matter variety suitable for crisp production |
| Agronomic Features | Outstanding all round disease resistance and with very low reducing sugars for lower temperature storage. |

| Diseases, Pests and Damage | | | |
|----------------------------|---|-------------------|---|
| Common Scab | 9 | Internal Damage | 5 |
| Skin Spot | 6 | External Damage | 7 |
| Dry Rot | 6 | G Rostoch | 9 |
| Blackleg | 5 | G Pallida (1,2,3) | 4 |
| Foliar Blight | 4 | Tuber Blight | 4 |

Note : Scale of 0-9. High numbers equate to high resistance, low numbers equate to low resistance to pathogens or pests. R=resistant, S=susceptible.
